

## UNITED STATES DISTRICT COURT

for the

Northern District of New York

In the Matter of the Search of )  
 (Briefly describe the property to be searched or identify the person by )  
 name and address )

(A) One iPhone Gold in Color and (B) One iPhone )  
 Silver in Color, which are Currently in the Custody )  
 of the United States Border Patrol at 4525 US )  
 Highway 11, Malone, New York 12953, Further )  
 Described in Attachment A.

Case No. 8:24-mj-555(09S)

**APPLICATION FOR A WARRANT BY TELEPHONE OR OTHER RELIABLE ELECTRONIC MEANS**

I, a federal law enforcement officer or an attorney for the government, request a search warrant and state under penalty of perjury that I have reason to believe that on the following person or property (identify the person or describe the property to be searched and give its location):

(A) One iPhone Gold in Color and (B) One iPhone Silver in Color, which are Currently in the Custody of the United States Border Patrol at 4525 US Highway 11, Malone, New York 12953, Further Described in Attachment A.

located in the Northern District of New York, there is now concealed (identify the person or describe the property to be seized):

See Attachment B

The basis for the search under Fed. R. Crim. P. 41(c) is (check one or more):

evidence of a crime;  
 contraband, fruits of crime, or other items illegally possessed;  
 property designed for use, intended for use, or used in committing a crime;  
 a person to be arrested or a person who is unlawfully restrained.

The search is related to a violation of:

Code Section

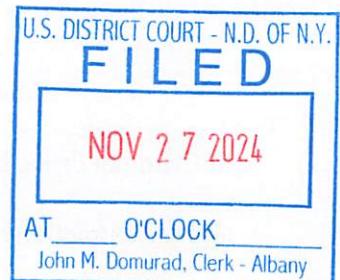

Title 8, U.S.C., Section 1324.

Offense Description

Alien Smuggling and Conspiracy to Commit the Same.

The application is based on these facts:

See Attached Affidavit.

Continued on the attached sheet.

Delayed notice of \_\_\_\_ days (give exact ending date if more than 30 days: \_\_\_\_\_) is requested under 18 U.S.C. § 3103a, the basis of which is set forth on the attached sheet.

11/26/24 - 3:30 PM

IN THE UNITED STATES DISTRICT COURT  
FOR THE NORTHERN DISTRICT OF NEW YORK

IN THE MATTER OF THE SEARCH OF:  
(A) ONE IPHONE GOLD IN COLOR;  
(B) ONE IPHONE SILVER IN COLOR

Case No. 8:24-mj-555(DJS)

**AFFIDAVIT IN SUPPORT OF AN  
APPLICATION UNDER RULE 41 FOR A  
WARRANT TO SEARCH AND SEIZE**

I, Dustin M. Matthews, being first duly sworn, hereby depose and state as follows:

**INTRODUCTION AND AGENT BACKGROUND**

1. I make this affidavit in support of an application under Rule 41 of the Federal Rules of Criminal Procedure for a search warrant authorizing the examination of seven electronic devices and the extraction of electronically stored information from those devices. The devices in question are as follows:

- a. One iPhone gold in color;
- b. One iPhone silver in color;

(collectively, the “Subject Devices”). The Subject Devices are currently in the custody of the United States Border Patrol at 4525 US Highway 11, Malone, New York 12953. The description of the property to be searched is described in the following paragraphs and in Attachment A. The evidence sought is described in Attachment B.

2. I am a Border Patrol Agent (“BPA”) with the United States Department of Homeland Security (“DHS”), Bureau of Customs and Border Protection (“CBP”), United States Border Patrol, and am assigned to the Burke Border Patrol Station. I have been a BPA since December 7, 2009. My primary duty is to assist in the prevention of illicit trafficking of people

and contraband between the official ports of entry. My authority to perform this mission is articulated in the Immigration and Nationality Act, sections 235 and 287, and Title 8, United States Code, Section 1357. These bodies of law relate to, among other things, a Border Patrol Agent's authority to interrogate any alien or person believed to be an alien, and to make an arrest of any alien who is entering or attempting to enter the United States in violation of the immigration laws. To enforce these laws, I have received training at the Federal Law Enforcement Training Center in Artesia, New Mexico in law, operations, firearms, driving techniques, and physical techniques.

3. I have investigated violations of the Immigration Nationality Act ("INA") including illegal entry of aliens in violation of Title 8, United States Code, Section 1325; the smuggling of aliens in violation of Title 8, United States Code, Section 1324; and the illegal reentry of aliens in violation of Title 8, United States Code, Section 1326. I am a "Federal law enforcement officer," with the meaning of Federal Rule of Criminal Procedure 41(a)(2)(C), that is, a government agent engaged in enforcing the criminal laws and duly authorized by the Attorney General to request a search warrant. I have written and executed search warrants for electronic devices and have reviewed the evidence contained within. I have analyzed data and information from electronic devices and presented that data as evidence during criminal investigations.

4. The statements and facts set forth in this affidavit are based in significant part on the following: a review of Border Patrol reports; my discussion with other investigators and BPAs involved in this investigation; my own involvement in the investigation; and my training and experience as a BPA. This affidavit is intended to show only that there is sufficient probable cause for the requested warrant and does not set forth all my knowledge about this matter.

5. Based on my training and experience and the facts set forth in this affidavit, there is probable cause to believe that Felix RAMOS ("RAMOS") has committed a violation of Title 8,

United States Code, Section 1324 (alien smuggling and conspiracy to commit the same); and that evidence of the violation is located inside the Subject Devices. There is also probable cause to search the Subject Devices, as described in Attachment A, for evidence instrumentalities, contraband, and/or fruits of these crimes, as described in Attachment B.

**PROBABLE CAUSE**

6. On November 23, 2024, at approximately 4:35 p.m., Swanton Sector Border Patrol Dispatch (KAD640) notified Border Patrol Agents assigned to the Burke Border Patrol Station that they had been contacted by the Royal Canadian Mounted Police (RCMP), who provided information regarding a large group of individuals moving south towards the US/Canada International Border near Sandy Knoll Road in Chateaugay, NY. Agents responded to the area and initially were unable to locate the reported individuals. At approximately 7:00 p.m., agents observed a white Acura RDX bearing New Jersey license plates N66RFT turning west onto Humiston Road off Sandy Knoll Road and then continuing onto Simms Road, where the vehicle pulled over and parked. Simms Road is a seasonal unimproved dirt road. This area of Chateaugay has recently seen an increase in cross border activity. Agents often encounter out-of-state registered vehicles in smuggling cases, as the drivers usually aren't from the immediate area.

7. After observing the vehicle sitting static on Simms Road for roughly 30 minutes, agents approached the RDX and made contact with the driver, later identified as Felix RAMOS. RAMOS was alone in the vehicle, and he told agents he was looking for a hotel. When agents offered to show him on his map application, RAMOS refused to show them his map. Agents suspected RAMOS was likely in the area to pick up the group of individuals that RCMP had spotted. Agents advised RAMOS that if this was the case, he should leave the area. RAMOS left from the immediate area, and traveled towards Plattsburgh, NY, which agents observed. Agents

continued to search for the subjects in the wooded area near Simms Road, to no avail. Agents passed along the information from the encounter to the oncoming midnight shift and suspected that RAMOS may come back and to keep an eye out for his vehicle in the area.

8. On November 24, 2024, at approximately 12:05 a.m., an agent positioned along US Highway 11 (US 11) just east of the town of Chateaugay, spotted the same RDX travelling west on US 11. The information was passed along to other agents, who were positioned west of Chateaugay. The RDX did not make it to the town of Chateaugay however, indicating to agents that it likely avoided the town and took backroads to get to the area around Sandy Knoll Road undetected. As anticipated, the RDX appeared approximately 40 minutes later, on McCormick Road travelling westbound toward County Route 52 (CR 52) by an agent that was concealed in the woods. The RDX then, instead of continuing across CR 52 and onto Hogan Road where it could get onto Sandy Knoll Road, turned south onto CR 52 and immediately pulled over. The observing agent assumed the RDX was picking up the individuals that had crossed earlier in that evening, especially when the RDX turned around and proceeded back east onto McCormick Road and then turned south onto Earlville Road. The RDX then turned east onto Jones Road and was then detected via electronic surveillance equipment travelling south on County Line Road. An agent positioned at the intersection of County Line Road and US 11 observed the RDX as it approached US 11 and as the agent came into view of the RDX, the RDX took off westbound on US 11 and accelerated to approximately 85 MPH. The agent immediately activated his emergency lights and sirens and pulled out behind the RDX. The RDX initially did not appear to be yielding, however a responding agent cresting the hill from the west in the oncoming lane with his emergency lights and sirens activated, seemed to persuade the RDX to yield, which it abruptly did. The totality of circumstances, including the out-of-state registered vehicle, its multiple suspicious

encounters near the border, and the earlier RCMP report had agents on high alert that this vehicle may be involved in a smuggling case.

9. Agents approached the vehicle and identified themselves as Border Patrol Agents in both the English and Spanish language and instructed the driver to roll down the back windows and to shut off the engine. The driver, which was still RAMOS, initially failed to comply with the instructions and appeared to be using his cell phone and reaching for something in the driver's side door. After several more loud and forceful commands to follow the agents' instructions, RAMOS complied and rolled down the back windows and shut off the engine. Agents could immediately see that the RDX was occupied well beyond its maximum safe operating capacity. There was now six passengers, including one individual in the cargo/trunk compartment attempting to conceal himself under backpacks and clothing. Agents asked RAMOS where he was coming from, and his initial response was New Jersey. Agents then inquired as to where he was going and he responded that he was going to New York City. Agents then asked who all the people were in the RDX and RAMOS stated that he picked them up from a house where they were working as housekeepers and taking them to New York City. Agents repeatedly had to tell RAMOS to keep his hands on the steering wheel where agents could see them, and he would continually reach down and into the center console. Agents asked RAMOS to step out of the vehicle and he complied. Agents then detained RAMOS in the back of a marked Border Patrol service vehicle and informed him three times that at the time, he was not under arrest, he was just being detained for the safety of the agents and all occupants in the RDX. Agents, not alluding to the fact they knew RAMOS was encountered in the area earlier that evening, asked RAMOS when he travelled to the area and he claimed to have just driven to Chateaugay and his GPS told him to turn off the main road onto the backroads where he got lost but eventually found the house where he was supposed to pick the

individuals up. While agents were speaking to RAMOS, they could clearly see that all the passengers in the vehicle were soaking wet and covered in grass and mud, likely from being out in the rain and in the wooded area near Sandy Knoll Road for an extended period of time. Agents asked RAMOS if the individuals were paying RAMOS to pick them up and drive them to New York City and he stated that they were paying him \$700.00. Agents then addressed the passengers in the RDX and asked the individuals where they were from. The passengers claimed to be from Mexico, Colombia and Guatemala and all admitted having crossed the border illegally earlier in the evening. None of the passengers were in possession of any documentation that would allow them to enter, pass through or remain in the U.S. legally. At this time all occupants from the RDX were placed under arrest and transported to the Burke Border Patrol Station for further interviews and processing.

10. At the Burke Border Patrol Station, the subjects and their personal belongings were searched incident to arrest for weapons or contraband. During these searches, BPAs seized two electronic devices from RAMOS. The devices were discovered on his person as follows:

- a. RAMOS: One iPhone gold in color; b. One iPhone silver in color;

11. At the station, biographical information and fingerprints were entered into Department of Homeland Security databases for all seven subjects. Record checks revealed that RAMOS is a Lawful Permanent Resident of the U.S. Records checks on the passengers confirmed information previously gathered roadside.

12. Based on my training and experience in this and other criminal investigations I have been involved with, including other investigations involving individuals entering the United States illegally, individuals who illegally cross the border will often communicate and coordinate with individuals in the United States to arrange for someone to pick them up once they have successfully

crossed, or to inform individuals in the United States or in their country of origin that they successfully crossed. Alien smugglers often communicate with each other and with the individuals they smuggle using cellular phones and downloaded applications to coordinate smuggling events. Smartphones, such as the Subject Devices, can also be used to access social media. Based on my training, knowledge, and experience with alien smuggling, I know that social media platforms such as Facebook, as well as telecommunications platforms such as WhatsApp, are often used by smugglers to find customers and for communication between smugglers and aliens illegally entering the United States. Additionally, individuals involved in crossing the border illegally often use a cellular telephone's GPS function to search for and map out potential crossing and pickup locations and to navigate to such places.

13. In this case, the timing of when six illegal aliens that were picked up by RAMOS speaks to the coordination involved in the smuggling event. RAMOS's vehicle was encountered by agents near the United States/Canada border at approximately 7:00 P.M and then observed leaving the area heading toward Plattsburgh, NY. Approximately five hours later, RAMOS returned to the United States/Canda border area east of where he was initially encountered. The time of night, between 12:05 AM and 12:30 AM, is also common for smuggling events and also indicates the aliens, or someone guiding the aliens, and RAMOS were coordinating the event. Given that all of the aliens had cell phones in their possession after crossing the border, probable cause exists that evidence related to communication or coordination of the smuggling event exists on the Subject Devices.

14. The Subject Devices are currently in storage at the Burke Border Patrol Station. In my training and experience, I know that the Subject Devices have been stored in a manner in which

their contents are, to the extent material to this investigation, in substantially the same state as they were when the Devices first came into the possession of the Border Patrol.

#### **TECHNICAL TERMS**

15. Based on my training and experience, I use the following technical terms to convey the following meanings:

- a. **Wireless telephone:** A wireless telephone (or mobile telephone, or cellular telephone) is a handheld wireless device used for voice and data communication through radio signals. These telephones send signals through networks of transmitter/receivers, enabling communication with other wireless telephones or traditional “land line” telephones. A wireless telephone usually contains a “call log,” which records the telephone number, date, and time of calls made to and from the phone. In addition to enabling voice communications, wireless telephones offer a broad range of capabilities. These capabilities include storing names and phone numbers in electronic “address books;” sending, receiving, and storing text messages and e-mail; taking, sending, receiving, and storing still photographs and moving video; storing and playing back audio files; storing dates, appointments, and other information on personal calendars; and accessing and downloading information from the Internet. Wireless telephones may also include global positioning system (“GPS”) technology for determining the location of the device. They may also have removable storage media connected to them or stored with them, including micro-SD cards or other types of memory cards.
- b. **IP Address:** An Internet Protocol address (or simply “IP address”) is a unique numeric address used by computers on the Internet. An IP address looks like a series

of four numbers, each in the range 0-255, separated by periods (e.g., 121.56.97.178). Every computer that accesses the Internet must be assigned an IP address so that Internet traffic sent from and directed to that computer may be directed properly from its source to its destination. Most Internet service providers control a range of IP addresses. Some computers have static—that is, long-term—IP addresses, while other computers have dynamic—that is, frequently changed—IP addresses.

- c. Internet: The Internet is a global network of computers and other electronic devices that communicate with each other. Due to the structure of the Internet, connections between devices on the Internet often cross state and international borders, even when the devices communicating with each other are in the same state.
- d. Digital camera: A digital camera is a camera that records pictures as digital picture files, rather than by using photographic film. Digital cameras use a variety of fixed and removable storage media to store their recorded images. Images can usually be retrieved by connecting the camera to a computer or by connecting the removable storage medium to a separate reader. Removable storage media include various types of flash memory cards or miniature hard drives. Most digital cameras also include a screen for viewing the stored images. This storage media can contain any digital data, including data unrelated to photographs or videos.
- e. Portable media player: A portable media player (or “MP3 Player” or iPod) is a handheld digital storage device designed primarily to store and play audio, video, or photographic files. However, a portable media player can also store other digital data. Some portable media players can use removable storage media. Removable

storage media include various types of flash memory cards or miniature hard drives. This removable storage media can also store any digital data. Depending on the model, a portable media player may have the ability to store very large amounts of electronic data and may offer additional features such as a calendar, contact list, clock, or games.

- f. GPS: A GPS navigation device uses the Global Positioning System to display its current location. It often contains records the locations where it has been. Some GPS navigation devices can give a user driving or walking directions to another location. These devices can contain records of the addresses or locations involved in such navigation. The Global Positioning System (generally abbreviated "GPS") consists of 24 NAVSTAR satellites orbiting the Earth. Each satellite contains an extremely accurate clock. Each satellite repeatedly transmits by radio a mathematical representation of the current time, combined with a special sequence of numbers. These signals are sent by radio, using specifications that are publicly available. A GPS antenna on Earth can receive those signals. When a GPS antenna receives signals from at least four satellites, a computer connected to that antenna can mathematically calculate the antenna's latitude, longitude, and sometimes altitude with a high level of precision.
- g. PDA: A personal digital assistant, or PDA, is a handheld electronic device used for storing data (such as names, addresses, appointments or notes) and utilizing computer programs. Some PDAs also function as wireless communication devices and are used to access the Internet and send and receive e-mail. PDAs usually include a memory card or other removable storage media for storing data and a

keyboard and/or touch screen for entering data. Removable storage media include various types of flash memory cards or miniature hard drives. This removable storage media can store any digital data. Most PDAs run computer software, giving them many of the same capabilities as personal computers. For example, PDA users can work with word-processing documents, spreadsheets, and presentations. PDAs may also include global positioning system ("GPS") technology for determining the location of the device.

16. Based on my training, experience, and research, I know that the Subject Devices are electronic devices that have capabilities that allow them to serve as a wireless telephone, digital camera, portable media player, GPS navigation device, and PDA. In my training and experience, examining data stored on devices of this type can uncover, among other things, evidence that reveals or suggests who possessed or used the device. Furthermore, given the nature and circumstances of the offenses in this case, it is reasonable to expect or assume that RAMOS's devices (the "Subject Devices") may contain records of communications he engaged in with individuals in Canada or the United States to coordinate the pickup of other subjects. These records may include communications with the aliens themselves or with other parties who directed or assisted RAMOS's activities.

#### **ELECTRONIC STORAGE AND FORENSIC ANALYSIS**

17. Based on my knowledge, training, and experience, I know that electronic devices can store information for long periods of time. Similarly, certain information from webpages and media that has been viewed via the Internet are typically stored for some period of time on the device. This information can sometimes be recovered with forensics tools.

18. There is probable cause to believe that things that were once stored on the Subject Devices may still be stored there, for at least the following reasons:

- a. Based on my knowledge, training, and experience, I know that computer files or remnants of such files can be recovered months or even years after they have been downloaded onto a storage medium, deleted, or viewed via the Internet. Electronic files downloaded to a storage medium can be stored for years at little or no cost. Even when files have been deleted, they can be recovered months or years later using forensic tools. This is so because when a person “deletes” a file on a computer, the data contained in the file does not actually disappear; rather, that data remains on the storage medium until it is overwritten by new data.
- b. Therefore, deleted files, or remnants of deleted files, may reside in free space or slack space—that is, in space on the storage medium that is not currently being used by an active file—for long periods of time before they are overwritten. In addition, a computer’s operating system may also keep a record of deleted data in a “swap” or “recovery” file.
- c. Wholly apart from user-generated files, computer storage media—in particular, computers’ internal hard drives—contain electronic evidence of how a computer has been used, what it has been used for, and who has used it. To give a few examples, this forensic evidence can take the form of operating system configurations, artifacts from operating system or application operation, file system data structures, and virtual memory “swap” or paging files. Computer users typically do not erase or delete this evidence, because special software is typically required for that task. However, it is technically possible to delete this information.

- d. Similarly, files that have been viewed via the Internet are sometimes automatically downloaded into a temporary Internet directory or “cache.”

19. *Forensic evidence.* As further described in Attachment B, this application seeks permission to locate not only electronically stored information that might serve as direct evidence of the above-listed offenses, but also forensic evidence that establishes how the Subject Devices were used, the purpose of their use, who used them, and when. There is probable cause to believe that this forensic electronic evidence might be on the Subject Devices because:

- a. Data on the storage medium can provide evidence of a file that was once on the storage medium but has since been deleted or edited, or of a deleted portion of a file (such as a paragraph that has been deleted from a word processing file). Virtual memory paging systems can leave traces of information on the storage medium that show what tasks and processes were recently active. Web browsers, e-mail programs, and chat programs store configuration information on the storage medium that can reveal information such as online nicknames and passwords. Operating systems can record additional information, such as the attachment of peripherals, the attachment of USB flash storage devices or other external storage media, and the times the computer was in use. Computer file systems can record information about the dates files were created and the sequence in which they were created.
- b. Forensic evidence on a device can also indicate who has used or controlled the device. This “user attribution” evidence is analogous to the search for “indicia of occupancy” while executing a search warrant at a residence.

- c. A person with appropriate familiarity with how an electronic device works may, after examining this forensic evidence in its proper context, be able to draw conclusions about how electronic devices were used, the purpose of their use, who used them, and when.
- d. The process of identifying the exact electronically stored information on a storage medium that are necessary to draw an accurate conclusion is a dynamic process. Electronic evidence is not always data that can be merely reviewed by a review team and passed along to investigators. Whether data stored on a computer is evidence may depend on other information stored on the computer and the application of knowledge about how a computer behaves. Therefore, contextual information necessary to understand other evidence also falls within the scope of the warrant.
- e. Further, in finding evidence of how a device was used, the purpose of its use, who used it, and when, sometimes it is necessary to establish that a particular thing is not present on a storage medium.

20. *Nature of examination.* Based on the foregoing, and consistent with Rule 41(e)(2)(B), the warrant I am applying for would permit the examination of the Subject Devices consistent with the warrant. The examination may require authorities to employ techniques, including but not limited to computer-assisted scans of the entire medium, that might expose many parts of the device to human inspection, in order to determine whether it is evidence described by the warrant. The examination will be performed by representatives from the Department of Homeland Security and their designees.

21. *Manner of execution.* Because this warrant seeks only permission to examine devices already in law enforcement's possession, the execution of this warrant does not involve the physical intrusion onto a premises. Additionally, it is unclear at this time what hours the government employee(s) who will be doing the examinations of these Subject Devices will be working at the time they perform them. Consequently, I submit there is reasonable cause for the Court to authorize execution of the warrant at any time in the day or night.

### CONCLUSION

22. Based on the foregoing information, I submit that there is probable cause to believe that RAMOS has violated Title 8, United States Code, Section 1324 (alien smuggling and conspiracy to commit the same). I respectfully request that a warrant be issued authorizing the search of the Subject Devices for evidence, instrumentalities, contraband, and/or fruits of those offenses.

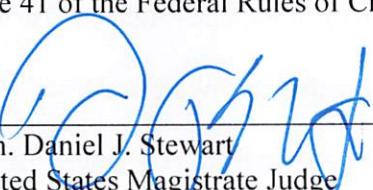

ATTESTED TO BY THE APPLICANT IN ACCORDANCE WITH THE REQUIREMENTS OF RULE 4.1 OF THE FEDERAL RULES OF CRIMINAL PROCEDURE

*D. Matthews* 11/26/24 - 3:30 PM

---

Dustin M. Matthews  
Border Patrol Agent  
United States Border Patrol

I, the Honorable Daniel J. Stewart, United States Magistrate Judge, hereby acknowledge that this affidavit was attested to by the affiant by telephone on November 29, 2024 in accordance with Rule 41 of the Federal Rules of Criminal Procedure.

---

Hon. Daniel J. Stewart  
United States Magistrate Judge

**ATTACHMENT A**

**Property to be Searched**

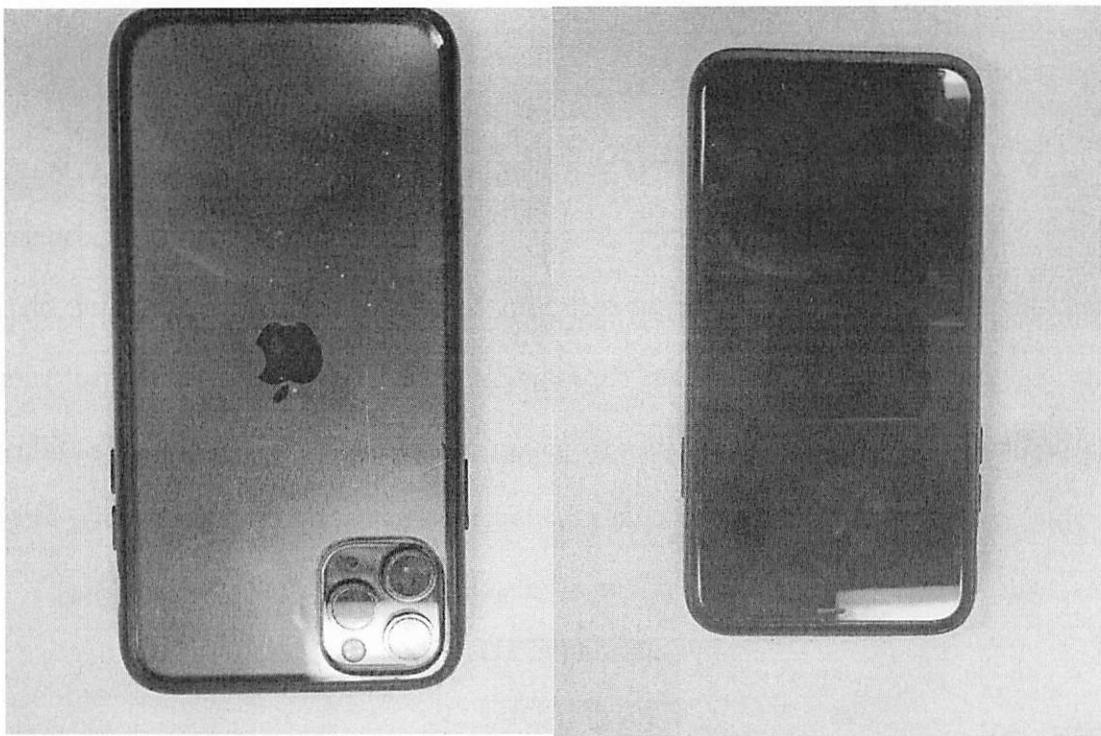

This warrant applies to the following electronic devices (collectively, the "Subject Devices"), to include any attached computer or electronic storage media including SD cards, all of which are currently in the custody of the United States Border Patrol at 4525 US Highway 11, Malone, New York 12953. This warrant authorizes the forensic examination of the Subject Devices for the purpose of identifying the electronically stored information described in Attachment B.

a. One iPhone gold in color, seized from Felix RAMOS;

b. One iPhone silver in color, seized from Felix RAMOS;

71

**ATTACHMENT B**

**Items to be Seized and Searched**

1. All evidence, fruits, contraband, and/or instrumentalities of violations of Title 8, United States Code, Section 1324 (alien smuggling and conspiracy to commit the same), this violations involving Felix RAMOS, and other as-yet unidentified co-conspirators, specifically the following from the Subject Devices, described with specificity in Attachment A, including deleted data, remnant data, or data contained within slack space:
  - a. Text messages, instant messages, chat room messages, emails, voice mail messages, and/or other communications relating to illegal international border crossings;
  - b. Records regarding any calls made or received;
  - c. Any photographs or audio recordings that relate to illegal international border crossings
  - d. Geolocation, mapping, and GPS records including information recording schedules or travel;
  - e. Records of, or information about, any Internet activity including records of Internet Protocol addresses used, firewall logs, caches, browser history, cookies, “bookmarked” or “favorite” web pages, search terms that the user entered into any Internet search engine, and records of user-typed web addresses;
  - f. Evidence indicating the device user’s state of mind as it relates to the crimes under investigation;
  - g. Evidence of the attachment to the device or of the device to other storage devices or similar containers for electronic evidence;

- h. Evidence of counter-forensic programs (and associated data) that are designed to restrict access to, facilitate concealment of, or eliminate data from the device.
2. Evidence of user attribution showing who used or owned the Subject Devices at the time the things described in this warrant were created, edited, or deleted, including:
  - a. Logs, phonebooks, saved usernames and passwords, documents and browsing history to include Internet Protocol addresses used, internet activity, firewall logs, caches, browser history and cookies, “bookmarked” or “favorite” web pages, search terms that the user entered into any Internet search engine, and records of user-type web addresses.
  - b. Evidence of software that would allow others to control the device, such as viruses, Trojan horses, and other forms of malicious software, as well as the evidence of the presence or absence of security software designed to detect malicious software;
  - c. Evidence of the lack of such malicious software;
  - d. Evidence indicating how and when the device was accessed or used to determine the chronological context of device access, use, and events relating to the crimes under investigation and to the device user.
3. As used above, the terms “records” and “information” include all of the foregoing items of evidence in whatever form and by whatever means they may have been created or stored, including any form of computer or electronic storage (such as flash memory or other media that can store data) and any photographic form.

4. During the search of the Subject Devices as described above, photographs may be taken to record the condition thereof.
